

Tokenized Collateral Is Live In Production

Solving the settlement uncertainty that locks up your capital.

Every hour of settlement lag is idle capital on your balance sheet. The average Tier 1 firm manages a \$74B collateral pool. A quarter of it earns nothing, held as a buffer against settlement uncertainty.

That caution is earned: settlement matching problems hit 70% of trades daily, so firms over-post by 6% just to stay covered.

Treasury pays for it in idle yield. Financing desks pay for it as balance-sheet velocity. Risk teams pay for it as a new control to sign off on.

Same capital, three different costs.

Better mobilization and less over-provisioning are worth \$340M a year for a Tier 1 firm. Overall, 52% of firms expect to manage live tokenized collateral by end-2026.

Trusted by 100+ banks. \$16T+ secured.
This is where collateral mobility is happening now.

Your Collateral Keeps Earning Until It Locks

- ▲ Tokenized collateral settles atomically, 24/7, on shared ledger infrastructure.
- ▲ Collateral moves 168 hours a week onchain, versus roughly 48 today, giving you 120 additional hours for liquidity and risk management.
- ▲ Pledges are locked, not pre-funded.
- ▲ Lifecycle management is automated by smart contracts, while assets remain in the institution's control throughout.
- ▲ Substitution and recall take minutes.

One Fireblocks build: Hold, control, and move tokenized collateral, on any chain.

HOLD

Collateral keeps earning until it's called.

Assets stay in your wallet, under your keys, whether pledged as margin, lent out, or held against a repo. Nothing sits idle waiting to be used.

CONTROL

Direct contract-call execution.

Settle DvP trades, pledge collateral, lend securities, or run a repo end to end, across 200+ supported networks, not just custody of the asset.

MOVE

Atomic settlement, any instrument.

Every leg completes together or not at all, intraday, whether it's a repo, a margin call, or a securities loan.

One platform handles custody, contract execution, and policy control.

Every new venue and chain, including Canton, where DTCC Tokenization Service runs, works on infrastructure Fireblocks already gives you.

01 Wallets and Custody

Tokenized collateral settles atomically, 24/7, on shared ledger infrastructure.

02 Contract-Call Execution

Collateral moves 168 hours a week onchain, versus roughly 48 today, giving you 120 additional hours for liquidity and risk management.

03 Policy and Governance

Pledges are locked, not pre-funded.

04 Reconciliation and Reporting

Lifecycle management is automated by smart contracts, while assets remain in the institution's control throughout.

05 Validator Choice

Substitution and recall take minutes.

Tokenized Collateral Pledge, Step by Step

YOUR INSTITUTION — FIREBLOCKS WALLET

01

Asset arrives in firm's own wallet, own keys

02

Pledge initiated, routed to approvers

03

Approved per policy, transaction signed

COUNTERPARTY — FIREBLOCKS WALLET

04

Transferred to counterparty's wallet

05

Accepted by receiving firm

06

Returned to complete the transaction

Every step runs under your policy control. No third party can move it unilaterally.
